

What is PJAM

**The following document is a brief description of the NTMA PJAM Program.
An detailed program documents are also available.**

Precision Jobs for American Manufacturing (PJAM) is an out-of-the-box comprehensive workforce development support program, designed and implemented by the National Tooling and Machining Association (NTMA). The goal of the PJAM program is to fill and retain the metalworking and manufacturing skilled workforce pipeline, by upgrading and standardizing regional training sites into world-class centers of excellence. This task will be performed by the developed PJAM standards. These standards cover; recruitment, training, placement/retention, funding and the industrial advisory committee. Out-of-the-box features include; providing audit tools to find training centers weaknesses, best practice tools that cover all statements of the PJAM standard, training for the employer, tools to develop an efficient industrial advisory committee, National Institute for Metalworking Skills (NIMS) credentialing and an experienced management team to provide assistance for auditing & site planning. PJAM program materials, such as best practices and audits, will be available online for all training centers and companies across the country, including government and defense contractors. Our goal is to help not just the metalworking industry, but to help all American manufacturing.

PJAM is a program America cannot live without. We need to bring America back to her past status as superpower of industrial manufacturing to secure our nation's future.

Funds for PJAM will be administered through the National Tooling and Machining Foundation (NTMF).
